

KEY FEATURES
The GYSFlash Lithium 1.12 and GYSFlash 6.12 are designed to provide a fast and efficient charging solution for 12V lithium batteries. They feature a compact design and a user-friendly interface, making them ideal for use in the field. The advanced charging curve ensures optimal performance and extends the battery's life.

GYS **LITHIUM CHARGERS**

GYS has extended its GYSFlash range with two new advanced chargers for 12V lithium batteries. The GYSFlash Lithium 1.12 and GYSFlash 6.12 have an advanced charging curve specifically suited to LiFePO4 lithium batteries. GYS has developed an eight step process for the charge that includes a cell balancing phase. This has been achieved through extensive research and development with Lithium battery manufacturers serving the motorcycle and motorsport markets and delivers a fundamental benefit of increased battery life.
